

**Fact:** It was against the law to teach a slave to read.

**Fact:** The slaves used symbols to read messages.

A shape has symmetry if the one side of the line is identical to the other side and can be folded to match perfectly. How many lines of symmetry are in each shape? Three examples are shown.

## Your Guide to Freedom

Starting in Ripley, find the safe path to freedom found in the port of Cleveland. Here are the rules:

### *If the shape has*

1 line of symmetry = head north

2 lines of symmetry = head west

3+ lines of symmetry = head east

No lines of symmetry = You've been caught. Go Back!
