

# SHOULD THE GOLDEN FLASHES FEAR THE ROO?

## ANSWER

Both are good arguments. The graph is accurate, but that is where the problem sits for arguing the Zips are better.

The graph shows win % but does not account for total wins. So if a sports team only plays once and wins, it looks like they dominate that sport. And a team that wins 60 and loses 40 times in another sport, might look like they are evenly matched, even though they have 20 more victories.

A double bar graph would work much better. That would show the true superiority of Kent State in overall athletic performance when the two schools meet.
